

giddy-device documentation

Alex Bondor

May 6, 2017

Abstract

This documentation contains all the necessary additional information for programming the giddy-device .

1 Display driver

The giddy-device uses an open source library that can be found in this github-repo. In addition, Adafruit GFX library is used as well. This can be downloaded from this github-repo.

The `libraries` folder contains the custom version of the libraries that work for the current hardware setup.
